ANDRII UDOT

Senior React / React Native Engineer

Kharkiv, Ukraine · Open to remote · udot.dron@gmail.com · +380 63 887 7880 · LinkedIn

SUMMARY

React / React Native engineer with nearly 6 years of commercial experience building cross-platform mobile apps and web platforms for retail, logistics, charity-tech and AI SaaS. A reliable team player who is equally effective working independently and owning a product end to end. Strong troubleshooter who stays calm under pressure and finds practical solutions when things go wrong. Fast self-learner: moved into software engineering from running a business and keeps pace with the ecosystem, from the React Native New Architecture and Next.js App Router to AI-assisted development. Core stack: TypeScript, React, React Native / Expo, Next.js, Redux Toolkit / RTK Query, Firebase.

SKILLS

Languages: TypeScript, JavaScript (ES2023+), HTML5, CSS3
Mobile: React Native (New Architecture), Expo (Expo Router, EAS Build/Submit, config plugins), Reanimated, FlashList, react-native-maps, Mapbox, barcode scanning, push notifications, deep links, native modules

Web: React 19, Next.js (App Router, Pages Router, Server Actions), Vite, MUI, Tailwind CSS / NativeWind, Radix UI / shadcn, Framer Motion, Lit Web Components

State & Data: Redux Toolkit, RTK Query, Redux-Saga, MMKV, REST, WebSocket, React Hook Form, Zod, Formik, Yup

Cloud & Backend: Firebase (Auth, Firestore, Cloud Functions, Cloud Tasks, Storage, App Hosting, Crashlytics, Analytics), Stripe, Genkit + Gemini / Imagen / Veo, AWS (S3, CloudFront, CodeBuild, ECR), Docker, GitHub Actions

Quality & Tooling: Git, ESLint, Prettier, Husky, lint-staged, Figma, Jira, i18next / gettext, Claude Code, Cursor

EXPERIENCE

Vilmate LLC — Software Engineer (React / React Native) · Kharkiv, Ukraine · **Dec 2021 – Present**

Retail Loyalty & Catalog Mobile App (iOS / Android) — Sole Mobile Engineer · Apr 2026 – Present
Full v3.0 rewrite of a live loyalty app for a Ukrainian supermarket chain; replaces the existing store app.

- Architected and built the app single-handedly from an empty repo: 56 screens, ~48K lines of strict TypeScript, 235 components, 52 custom hooks, 13 Redux slices and 29 RTK Query endpoint modules across 3 backend APIs.
- Created a Figma-synced design system: 48 shared UI primitives, design tokens mapped to Tailwind (NativeWind), 109 SVG icons exported by script, light/dark/system themes.
- Delivered the loyalty core: phone sign-in with SMS verification, physical/virtual card binding, QR and barcode card at checkout, family accounts, bonuses, purchase history and receipts.
- Built catalog and shopping features: search with filters, product gallery with pinch-zoom, favourites, shopping lists with optimistic updates, personal offers and coupons, barcode price-check scanner, Google Maps store locator.
- Implemented push notifications (FCM/APNs) with deep-link routing, Universal Links / App Links and a custom scheme; links received before sign-in are replayed after auth.
- Designed a tiered data-fetching strategy (startup prefetch, refetch-on-focus, lazy paginated histories) and moved persistence to MMKV + SecureStore for fast synchronous startup.
- Added observability: Crashlytics with per-screen error boundaries, GA4 analytics with a typed event registry; localised the app in Ukrainian and English.
- Owned the release pipeline: dev/prod environments with separate bundle IDs and Firebase configs, EAS Build & Submit, 5 custom Expo config plugins, local Gradle/Xcode scripts for APK/AAB/IPA and TestFlight upload.

Stack: Expo SDK 57, React Native 0.86, React 19, TypeScript, Expo Router, RTK Query, MMKV, NativeWind,

Reanimated 4, React Hook Form, Zod, Firebase.

AIDA — AI Marketing Platform (SaaS) — Full-Stack Developer · Dec 2025 – Mar 2026

AI brand strategist that analyses a brand's online presence into a "Brand Brain", then generates, schedules and publishes on-brand content.

- Built LinkedIn (personal/company pages, video) and Instagram/Facebook publishing on Firebase Cloud Functions, with Cloud Tasks scheduling and scheduled OAuth token refresh.
- Developed the Content Calendar: day/week/month views, drag-and-drop, evergreen queue, reschedule / duplicate / publish-now, timezone-correct times.
- Built the Campaign Wizard (PDF upload and analysis, language choice, AI generation), redesigned AI Maker Studio (6 tools), and built Media Library imports from Google Picker, Dropbox and Unsplash, plus Shopify product-to-post.
- Implemented Genkit AI flows on Gemini / Imagen / Veo (image-to-image, prompt-based editing) and server-side ffmpeg logo compositing onto video.
- Improved reliability and performance: deploy version-sync that eliminated stale-build chunk-load errors, App Hosting configuration against cold starts, render optimisations.

Stack: Next.js 15, React 18, TypeScript, Tailwind CSS, Radix UI, Firebase, Genkit, Gemini / Vertex AI, Stripe.

RunForUkraine — Charity Running Platform (Web + Mobile) — React / React Native Developer · Jan 2023 – Jun 2025

Platform where runners and teams raise donations for Ukrainian charities.

- Top contributor to the Next.js web platform: ~54% of 2,900+ commits over 2.5 years.
- Built Stripe donation flows (sponsor and team donations, invoices), Google/Apple sign-in and password reset, team create/join, leaderboards and reports, Mapbox maps and push notifications (FCM).
- Built Lit Web Components (header, login, map, donate dialog) embedded into the marketing site; created transactional email templates.
- React Native app: delivered the Dec 2024 redesign, My Team / Edit Team and Notifications screens, and releases to both stores.

Stack: Next.js, React Native, Redux-Saga, MUI, Formik, Stripe, Mapbox, Firebase, Lit, GitHub Actions, Docker, AWS ECR.

Driver Web Apps (Logistics, Sweden) — React Developer · Jan 2025 – Apr 2025

- Built from scratch 3 mobile-first web apps for drivers: tire reports (axle and wheel layouts for several vehicle types, per-tire pressure and depth), fuel reports (licence-plate lookup, odometer, photo capture) and BankID proof-of-delivery.
- Implemented the BankID flow with QR codes and RTK Query polling, followed by booking sync and proof-of-delivery submission.
- Merged the three apps into one with route-level lazy loading and error boundaries; Swedish localisation; deploys via AWS CodeBuild → S3 / CloudFront.

Stack: React 18, TypeScript, Vite, MUI, RTK Query, Formik, Yup.

Dispatcher Web App (Logistics) — React Developer

- Built from scratch a web app for dispatchers: shipments, driver assignment and support, Mapbox maps, real-time WebSocket chat with drivers, BankID.

Stack: TypeScript, React, RTK Query, Formik, MUI, Mapbox, WebSocket.

Delivery Driver Mobile App (Android) — React Native Developer

- Built from scratch to Google Play release a mobile app for terminal and courier delivery drivers.
- Integrated built-in hardware barcode scanners on Zebra and Newland devices; replaced a third-party RN library with a custom Java native module for the Zebra scanner.
- Wrote native modules for background driver location and opening a partner app with parameters; added Mapbox, in-app chat and Firebase push.

Stack: React Native, Redux Toolkit, Formik, Mapbox, Firebase, Java.

Earlier Vilmate projects: climate-compensation sales app for associations and schools, built from project creation to publication in App Store and Google Play (Redux Thunk, Victory Native charts); internal time-tracking and reporting app for accounting and PMs (Redux-Saga, DevExpress).

IT Craft — React Native Developer · Kharkiv, Ukraine · **Nov 2020 – Dec 2021**

- **Astrology & meditation app:** built screens and features, Facebook / Google / Apple sign-in, real-time chat (ConnectyCube), i18n; prepared and uploaded App Store builds.
- **Marketplace app** (orders, invoices, payments, statistics): refactored legacy code, built new features, push notifications (OneSignal, Firebase), statistics charts (Victory Native).
- **Parental control app** (parent/child) and **delivery service app:** new features, screens, Reanimated animations.
- **Italian football club news app:** new features, fixed in-app subscription issues, releases to App Store and Google Play.

Stack: TypeScript, React Native, Redux, Redux Toolkit, Rematch, Formik, Reanimated, i18next, Firebase.

SKALAR UA — Front-End Trainee · Kharkiv, Ukraine · **Mar 2020 – Aug 2020**

Self-employed — Small Business Owner · Kharkiv, Ukraine · **2010 – 2020**

Ran own business before moving into software engineering.

EDUCATION

National Technical University "Kharkiv Polytechnic Institute" — Diploma in Systems Engineering, Intelligent Decision-Making Systems · 1995 – 2001

COURSES

Udemy: JavaScript – The Complete Guide · React + Redux Professional Development · React Native Mobile Apps · The Modern GraphQL Bootcamp · Angular: Theory and Practice

A-Level: Front-End Advanced (two JS and React projects, certificate)

LANGUAGES

Ukrainian — Native · English — Upper-Intermediate (B2)
